

Copy wood/concrete

Furniture that examines the symbiosis between concrete and wood and how these materials affect one another.

The concrete receives the texture from the wood and leaves its traces on him. Then a dialogue was created between all the elements, between the Treated and not.

The study began with a look and wonder at construction site where I noticed the way concrete, which I perceive as "rough" manages to copy details in an amazing way.

Materials

Oak, concrete and Metal base

Finish

Metal: Plated or powder coated

Wood: Hand rubbed oil finish or water-based clear matte lacquer

Dimensions

Lounge table –

Height – 42 cm
Length – 100 cm
Width – 50 cm

Specifications

Available in various sizes and various compositions between the concrete and the wood

Price

Start at 2,500₪

Side table –

Height – 50 cm
Diameter – 50 cm
